NARAYAN KUMAR

Full-Stack Software Engineer
+91 7310703828 | narayanpandit5252@gmail.com | LinkedIn | GitHub | LeetCode | GeeksforGeeks

Summary

Final-year Computer Science (B.Tech) student with hands-on full-stack development experience across Java, Spring Boot, React.js, TypeScript, Python, FastAPI, and PostgreSQL. Proven ability to design and ship production-grade REST APIs, secure authentication/RBAC (Role-Based Access Control) systems, and asynchronous job-processing pipelines. Strong foundation in object-oriented programming, relational database design, and clean, maintainable, production-ready code. Fast learner with a track record of independently architecting and delivering full-stack projects end to end, from system design through deployment.

Skills

- **Languages**: Java, Python, JavaScript, TypeScript, SQL
- **Frontend**: React.js (React 18), HTML5, CSS3, Vite, Recharts
- **Backend**: Spring Boot, FastAPI, REST API Design, Asynchronous Job Processing
- **Databases**: PostgreSQL, MongoDB, SQLite
- **Security & DevOps**: Trivy (Container Scanning), Snyk (Dependency Scanning), OWASP ZAP (Dynamic Application Security Testing), Role-Based Access Control (RBAC), Data Encryption (Fernet/AES), API Key Authentication
- **Tools & Platforms**: Git, GitHub, VS Code, IntelliJ IDEA, Postman, AWS S3, CI/CD Integration

EDUCATION

Galgotas College of Engineering and Technology **Aug 2023 - Jun 2027**
B.Tech, Computer Science & Engineering *Greater Noida, India*
- **GPA:** 7.0 / 10

JCM International School **Jan 2021 - Jul 2022**
Class XII *Haryana, India*
- **GPA:** 75.6%

PROJECTS

Hospital Management System **Aug 2025 - Nov 2025**
- Built a full-stack Hospital Management System with Spring Boot, HTML, CSS, and JavaScript, supporting patient, doctor, and appointment management for concurrent user roles.
- Designed and shipped 15+ secure, scalable REST API endpoints integrated with PostgreSQL for patient records, scheduling, and hospital workflows.
- Optimized PostgreSQL schemas and indexing strategy, reducing average query response time by an estimated 80%.

TriSentryHub **Mar 2025 - Jun 2025**
- Architected and built a full-stack, self-hosted vulnerability operations dashboard using FastAPI and React 18 with TypeScript, unifying Trivy, Snyk, and OWASP ZAP into a single normalized data model - eliminating manual cross-referencing across 3 separate scanner tools.
- Designed an asynchronous scan-job orchestration engine with real-time status tracking (pending/running/completed) and live log streaming, cutting scan-visibility turnaround from manual checks to real time.
- Implemented secure authentication and Role-Based Access Control (RBAC) with per-page permissions across admin user roles; encrypted scanner credentials at rest using Fernet (AES-based) symmetric encryption.
- Built REST API integration endpoints secured with hashed, one-time-reveal API keys via X-API-Key authentication, enabling external CI/CD pipelines and scripts to trigger and retrieve scans programmatically.
- Developed multi-format report parsing/export (JSON, HTML, CSV, PDF) using BeautifulSoup, lxml, pypdf, and jsPDF, backed by SQLite with optional AWS S3 and PostgreSQL storage integration; led a team of 2 members, coordinating task allocation and code reviews to deliver all milestones on schedule.

Certifications

- Java Programming Internship: Simplilearn / CodeAlpha - OOP, data structures, file handling, exception handling, and GUI application development through real-world projects.

Achievements

- **Led development of the TriSentryHub project:** coordinated task allocation and delivered all milestones on schedule while collaborating on feature builds, debugging, and performance improvements.
